Profile

MSc Human-Computer Interaction student at the University of Nottingham (graduating September 2027) with a BSc in Computer Science and Design. I combine user research, quantitative analysis and hands-on prototyping, from a patent-filed guidance system presented at Emerge, IIT Bombay to product research for fintech and NGO clients. Seeking a UX research or R&D role.

Education

MSc Human-Computer Interaction, University of Nottingham (2026 to 2027), expected September 2027

BSc Computer Science and Design, FLAME University, India (2022 to 2026)

Research Activity

- **Patent:** Application filed for the multimodal guidance system (BSc graduation project).
- **Presented:** Guidance system at Emerge, IIT Bombay; two independent research posters at FLAME Undergraduate Research Day.
- **Upcoming:** ByteSize to be presented at ICORD'27, January 2027.
- **Organising:** Key organiser of the HCI PAI India 2025 symposium.

Projects

Multimodal Interactive Guidance System (BSc graduation project)

- Built a real-time computer vision and haptic guidance system linking camera tracking, Python processing and microcontroller firmware.
- Tested latency and feedback thresholds over 3 rounds with 10 participants each. Found that active feedback helps beginners and used it to build a closed-loop, real-time feedback system.

PadCare: Public Sanitation Terminal (System Designer and Researcher)

- Evaluated usability friction and adoption barriers in public dispensing hardware, then redesigned it as an accessible dispensing and touchless disposal unit.
- Built a working 1:1 prototype with touchless sensor triggers, fixing mechanical jamming and maintenance-access problems.

UPAY: NGO Management Information System (Technical Architecture and Product Lead)

- Gathered requirements and designed a platform from scratch for student records, inventory and logistics across 10-11 learning centres.
- Modelled the database, role-based access and validation rules, replacing fragmented spreadsheets, and built a dashboard for live centre reporting.

ByteSize: RAG AI Platform for Cafe Entrepreneurs (Founder and Full-Stack Developer)

- Built and deployed a web portal with a retrieval-augmented AI assistant for branding and strategy insights, with a data pipeline from survey data to LLM APIs balancing accuracy, latency and cost.

Experience

User Experience and Product Strategy Intern, Idealake, Mumbai, India (May to July 2025)

- Defined information architecture and interface specifications for enterprise clients, including HDFC Bank and Cadila Pharmaceuticals.
- Analysed clickstream and drop-off data to find bottlenecks and redesign user journeys.
- Worked with engineers to turn requirements into developer-ready user stories and wireframes.

UI/UX and Product Design Intern, Buddha Tech, Kathmandu, Nepal (May to July 2024)

- Led user testing sprints with 15-18 participants, turning behavioural data and feedback into feature changes.
- Built a UI design system and component specifications; audited conversion funnels against business KPIs.

Outreach, Administration and Data Systems Intern, Practical Action, Kathmandu, Nepal (May to August 2023)

- Gathered stakeholder input to map field requirements, and built Excel reporting models feeding executive dashboards.

Skills

Research: usability testing, user interviews, surveys, thematic analysis, SUS, personas, heuristic audits, journey mapping, funnel analysis

Analysis: SQL, Python, Excel, SPSS

Build: Figma, HTML/CSS/JavaScript, Arduino, computer vision, RAG and LLM APIs, Unity, Blender, CAD, 3D printing, mixed reality setups, Miro

Languages: English (fluent, IELTS Academic 8.5) | Nepali (native) | Hindi (fluent)
