ABHIPSHA LUITEL

Nottingham, UK | luitelabhipsha@gmail.com | +44 7345249715 | Portfolio: abhipshal.github.io/My-Website

Profile

Designer and developer with a BSc in Computer Science and Design and an MSc in Human-Computer Interaction in progress at the University of Nottingham. I design and build interactive products and test them with real users, from a computer-vision fitness mirror (patent application filed) to a financial learning app for HDFC Bank. Available full-time from September 2027.

Education

MSc Human-Computer Interaction, University of Nottingham | 2026 to 2027 | In progress, expected September 2027

BSc Computer Science and Design, FLAME University, India | 2022 to 2026 | CGPA 7.35/10 (final-semester SGPA 9.54/10)

Final-semester modules: Graduation Project, Data Driven Design and Speculative Design (all Outstanding)

Projects

Fitness Mirror: Real-Time Virtual Trainer (BSc graduation project)

- Designed and built a mirror-based trainer that uses computer vision and haptic feedback to give real-time guidance on exercise form.
- Tested latency and feedback thresholds over 2 rounds with 10 participants each with different participants. Found that active feedback helps beginners and built real-time feedback into the design as a result.
- Added video demonstrations alongside exercise names after user testing showed beginners needed clearer visual guidance.

HDFC RuLearn: Financial Learning App (Idealake internship project)

- Addressed financial literacy in India: despite the growth of digital banking and cashless payments, financial education remains inaccessible and hard to relate to for most people.
- Researched whether the banking app itself could host learning modules tailored to a user's age and life stage and proposed gamifying the process.
- Designed the app screens in Figma across several iterations: a module library personalised using the demographic data the banking app already holds, a roadmap showing users what to complete in each module, and a simulated investing task where users practise with virtual money.
- Shown to HDFC officials and Idealake developers, who responded positively.

Sakhi Bins: Public Sanitation Terminal (System Designer and Researcher)

- Evaluated usability friction and adoption barriers in public dispensing hardware, then redesigned it as an accessible dispensing and touchless disposal unit.
- Built a working 1:1 prototype with touchless sensor triggers, fixing mechanical jamming and maintenance-access problems.

Other projects

- **UPAY, NGO Management Information System:** Designed and built a platform for student records, inventory and logistics across 9 cities with multiple learning centers each, replacing spreadsheets with role-based access and a live reporting dashboard.
- **ByteSize, RAG AI Platform for Cafe Entrepreneurs:** Founded and built a web portal with a retrieval-augmented AI assistant giving branding and strategy insights. Accepted for presentation at ICORD'27, January 2027.

Experience

User Experience and Product Strategy Intern, Idealake, Mumbai, India | May to July 2025

- Defined information architecture and interface specifications for enterprise clients, including HDFC Bank and Cadila Pharmaceuticals.
- Analysed clickstream and drop-off data to find bottlenecks and redesign user journeys.
- Worked with engineers to turn requirements into developer-ready user stories and wireframes.

UI/UX and Product Design Intern, Buddha Tech, Kathmandu, Nepal | May to July 2024

- Led user testing sprints with 15+ participants, turning behavioural data and feedback into feature changes.
- Built a UI design system and component specifications, and audited conversion funnels against business KPIs.

Research and Recognition

- Presented the guidance system at Emerge, IIT Bombay, and two independent research posters at FLAME Undergraduate Research Day.
- Key organiser of the HCI PAI India 2025 symposium.

Skills

Design: Figma, wireframing, prototyping, information architecture, user flows, design systems, journey mapping, heuristic audits

Research: usability testing, user interviews, surveys, thematic analysis, SUS, personas, funnel analysis

Build: HTML/CSS/JavaScript, Python, SQL, Arduino, computer vision, Unity, RAG and LLM APIs

Languages: English (fluent, IELTS Academic 8.5) | Nepali (native) | Hindi (fluent)
